

Option 2: MedImage Server on each PC (Own installation of MedImage Proxy Server)

Pros:

- No software to be written.
- Only a standard Windows installer need be installed on each PC.

Cons:

- Installation on each PC must be agreed and completed by IT
- A web connected server must be set-up and a sysadmin must install an off-the-shelf MedImage software server (i.e. some initial setup cost. AtomJump can do this, if preferred.)
- Double step phone-to-PC, PC-to-application user process
